

# AMINOVIT-LIV EXTRA

Vitamin-mineral premix to enhance  
egg quality and production

# AMINOVIT-LIV EXTRA

The good performance of the liver is essential to maintain productivity levels and health status, especially in laying hens

## Fatty liver

### Causes

- Excess of energy consumption
- High density of birds in battery
- Use of rancid fats
- Use of moldy corn
- Presence of mycotoxins in the feed

### Consequences

- Progressive egg laying decrease
- Decrease in egg size
- Decreased feed intake
- Decrease in yolk pigmentation
- Worst quality of the eggshell
- Increased mortality rate

## Benefits

- Contains nutrients that are involved in the mobilization of fats and its metabolism, that enhance immunity response, with an intense antioxidant and anti-inflammatory activity, which reduces or prevents the destruction of hepatocytes due to oxidative stress.
- Maintains constant egg production during the maximum period of time
- Larger and more uniform egg size
- Avoids decrease in daily feed intake
- Improves the color of the yolk and the quality of the egg Shell
- Increased number of eggs laid per bird
- Improves digestibility and favours the elimination of toxins
- Helps regenerate liver cells
- Appetite enhancer

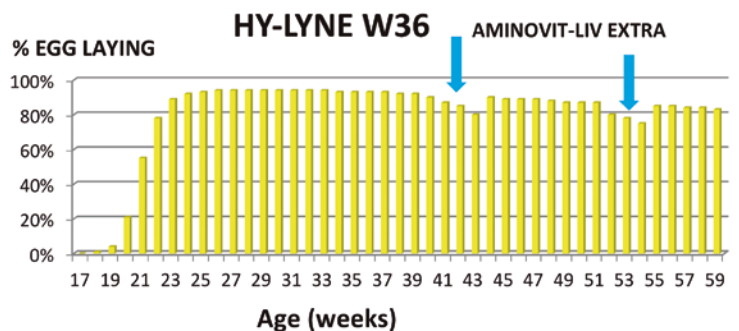

## Prevention measures

### Farm management

- Adequate facilities
- Avoid stress situations
- Restrict consumption
- Use of raw materials in optimal conditions
- Use mold inhibitors

### Nutrition measures

- Decrease the energy levels of the feed
- Less carbohydrates and more quality added fat
- Use **AMINOVIT-LIV EXTRA**

### DOSAGE LAYERS AND BREEDERS:

2 - 3 kg / TN during 15 - 30 days

**FAMIQS**
